

# Project Design Phase

## Proposed Solution

|               |                                                |
|---------------|------------------------------------------------|
| Date          | Oct 2 <sup>nd</sup> 2026                       |
| Team ID       | 6ab8c330c23107aaaa72e953                       |
| Project Name  | Import Data using Transform Maps (Spreadsheet) |
| Maximum Marks |                                                |

**Project Name:** Import Data Using Transform Maps

Project team shall fill the following information in the proposed solution.

| S.No. | Parameter                                | Description                                                                                                                                                  |
|-------|------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.    | Problem Statement (Problem to be solved) | Importing large amounts of external data manually into ServiceNow is time-consuming, error-prone and difficult to scale.                                     |
| 2.    | Idea / Solution description              | Load CSV/Excel data into an Import Set and use a Transform Map to map source fields to target fields and transform data before creating or updating records. |
| 3.    | Novelty / Uniqueness                     | Combines staging, field mapping, matching and transformation in a reusable workflow. Transform Scripts can handle special data-processing requirements.      |
| 4.    | Social Impact / Customer Satisfaction    | Reduces repetitive work, speeds up record creation and improves consistency of ServiceNow data, helping administrators and end users.                        |
| 5.    | Business Model (Revenue Model)           | Automation reduces operational effort and data-entry cost. The approach can be used in ServiceNow implementation and data-migration projects.                |
| 6.    | Scalability of the Solution              | The same method can be reused for different source files, target tables and departments, with additional field maps and scripts as requirements grow.        |

**Note:** The solution uses Import Sets for staging and Transform Maps for mapping, matching and transformation before records are created or updated.
