2	Tune the Model	Coalesce Tuning (duplicate control): Coalesce = true on field map u_employee_id → u_employee_id; the other four field maps (u_name, u_department, u_location, u_email) remain false. Transform Map settings: Run business rules – checked, Enforce mandatory fields – No, Copy empty fields – unchecked, Order – 100. Validation Method: Transform History comparison of the three loads (inserts / updates / ignored) and record-level verification in the Employee Tests list (1 to 17 of 17): • SB-0004 name updated from “Ajay Kumar” to “Ajay”. • SB-0010 email updated from test10@gmail.com to test18@gmail.com. • SB-0016 (Siri) and SB-0017 (Naga sai) inserted as new records. • Re-submitting the same sheet produced 0 inserts / 0 updates / 4 ignored, so no duplicates were created.	 Figure 3: Field Maps (5) - Coalesce set to true on u_employee_id. Figure 4: Employee Tests list after the update load – 17 records.
