

Project Design Phase-II Data Flow Diagram & User Stories

Date	Oct 2nd 2026
Team ID	6ab8c330c23107aaaa72e953
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	

Data Flow Diagram (DFD)

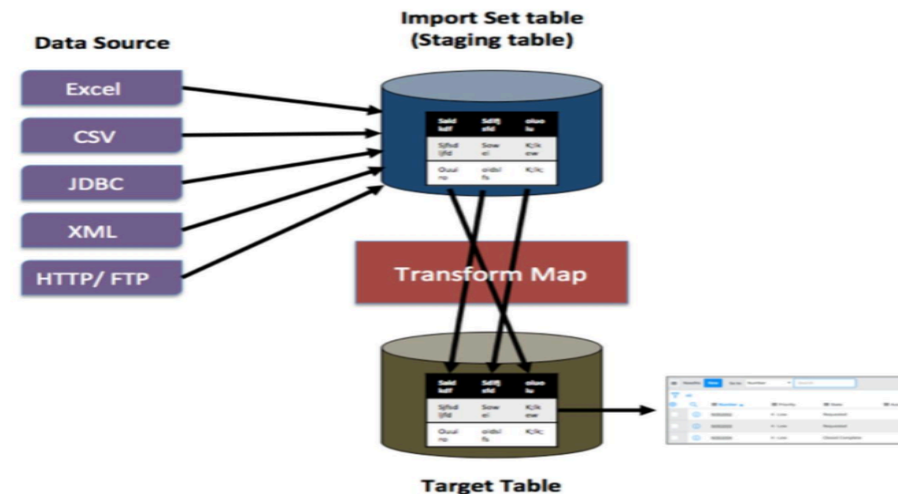

A Data Flow Diagram (DFD) is a graphical representation of the flow of data within a system. It shows how data enters and leaves the system, how it is processed, and where it is stored. It helps to understand the overall working and data movement of a system.

Example: FLOW

Example: DFD Level 0

1. Load Data into a staging table
2. Create Transform Map
3. Run Transform to move data from the staging table to the target table
4. Check data integrity

User Stories

The user roles and requirements are based on the employee data import process in ServiceNow. You can copy and paste this table directly into your Word document. I've formatted it with clear borders so that the columns and rows are easy to follow.

User Type	Functional Requirement (Epic)	User Story No.	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	Spreadsheet	USN-1	Prepare employee spreadsheet with ID, Name, Email, Department and Location.	All required fields are present.	High	Sprint 1
Administrator	Spreadsheet	USN-2	Verify employee details before upload.	Missing/incorrect data is identified.	High	Sprint 1
Administrator	Import Set	USN-3	Upload employee spreadsheet using Import Sets.	Import Set is created successfully.	High	Sprint 1
Administrator	Import Set	USN-4	View imported employee data.	Records are displayed correctly.	High	Sprint 1
Administrator	Validation	USN-5	Validate employee data before transformation.	Invalid and duplicate records are identified.	High	Sprint 1

Administrator	Transform Map	USN-6	Create Transform Map between source and target tables.	Correct tables are connected.	High	Sprint 2
Administrator	Field Mapping	USN-7	Map employee fields to target fields.	All fields are mapped correctly.	High	Sprint 2
Administrator	Transformation	USN-8	Run Transform Map to transfer employee data.	Data is transferred correctly.	High	Sprint 2
Administrator	Identification	USN-9	Use Employee ID to identify existing records.	Existing records are identified.	High	Sprint 2
Administrator	Record Management	USN-10	Insert new employee records.	New records are added successfully.	High	Sprint 2
Administrator	Record Management	USN-11	Update existing employee records.	Matching records are updated.	High	Sprint 2
Administrator	Monitoring	USN-12	View transformation status.	Processing status is available.	Medium	Sprint 3
Administrator	Error Handling	USN-13	Identify failed employee records.	Failed records and errors are shown.	Medium	Sprint 3

Administrator	Verification	USN-14	Verify transformed employee records.	Target table contains correct data.	High	Sprint 3
Administrator	Summary	USN-15	Review import results.	Inserted, updated and failed records are shown.	Medium	Sprint 3
